

East Anglia Fenlands through Time
April 2010 / May 2013 attribution
Andrew Zolnai blog.zolnai.ca

Darby (1969, 1974) describes the economic geography of East Anglia from the 1087 Domesday census, and the 1327-34 and the 1640-1641 Subsidy tax assessments. The switch of wealth from the Uplands in the north and south, to the Lowlands in the centre, is illustrated through 55 map figures. Some are re-created here as thematic maps, using Ordnance Survey OpenData released this month under *Creative Commons Attribution - ShareAlike 3.0 Unported (CC BY-SA 3.0)* as detailed below.

From this were derived the following data. Parishes are the common areal unit in history publications. And Darby uses these two attributes as a measure of economic wealth: ploughteams in the Domesday data, and tax assessment in the Subsidy data. Two attributes were added to the Parishes, PloughTeam (number per 1000 acres) and Subsidy (assessment per 500 or 1000 acres).
